

S'cur'ty

A brief introduction to how and why it will go
wrong

Created by [Felix Hawkins](#) / [@fifiwhimsy](#)

We have a sea of internet traffic, and
there be pirates looking for your ports

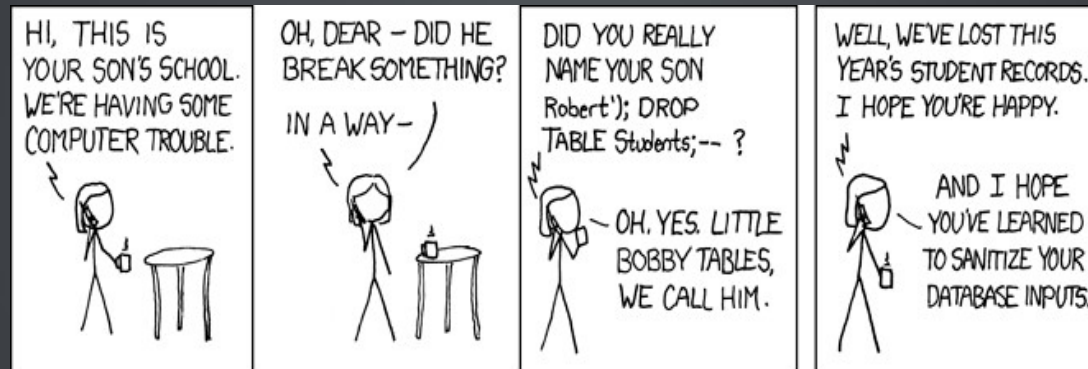

port and url scanning

Know your friends, close thine
commoners and the revolt your enemy

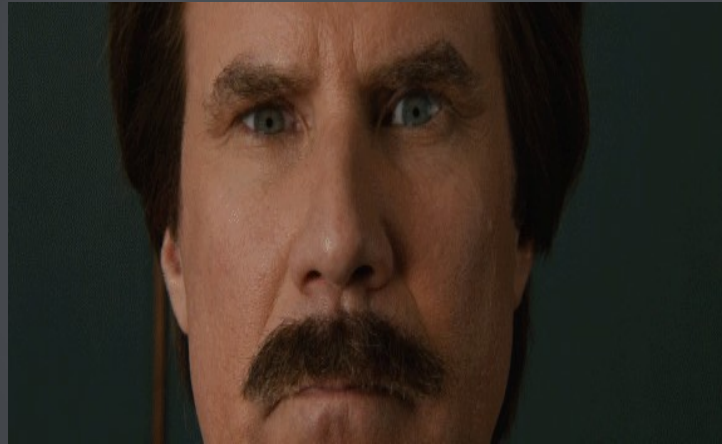

fuzz testing

Dropping the ball

SQL injection

The Good, The Bad and The Very Very Cross

XSS attacks

Crazy horses and warewolves

trojans, malware, hijackware, ransomware,
casualwear

For the net to work you can't
have too many fish

network level attacks, DDOS

Your only as as your weakest url_for

social engineering and weak link devices

Tools

Zap proxy as a docker image

Tool list

Burp proxy

Zenmap scanning tool

Metasploit framework

Skipfish url scanner

Automated ruby dependencies auditor

Slowloris DDOS tool

Metasploitable hack victim

Kali Linux

THE END
